

BLOOMBERG - XBBG - POLARS - ADAPTIVE RESEARCH

Technical Product Report

15-minute product-split targets, dynamic multi-indicator patterns, a three-entry daily budget, risk regimes, and frozen out-of-sample evidence.

DEMO / PAPER DATA

As of	Products	Structures	Model trials	Actionable	Watch
2026-09-01	4	337	2,979	0	1

Synthetic demo; no trade recommendation. Model demo-20260901-172629-0e7bc47538 evaluated 2,979 preregistered trials and selected 331 structure strategies. Selected OOS ledger: 629 trades, net \$134,890, 2x-cost net \$91,142. Current board: 0 actionable and 1 watch. Latest 30 sessions (2026-07-22 to 2026-09-01): 204 selected-strategy trades, net \$42,287, win rate 94.6%, max drawdown \$0; worst single-structure drawdown \$434. Portfolio budget selected 88 of 203 lockbox candidates, with at most 3 new trades in one session; capped net was \$19,017. Frozen model age is 0 completed sessions (maximum 5).

This report is decision support, not an order ticket. Pattern state is a transparent summary of the frozen adaptive combination; it does not override validation, data, liquidity, expiry, or model-freshness gates.

Selected OOS trades	Selected OOS net	30d candidates	30d selected	30d capped net	Max new trades/day
629	\$134,890	203	88	\$19,017	3

How the dynamic pattern engine works

Seven fixed experts combine different indicator families. Each expert emits long, short, or neutral. After a delayed 26-bar cost-aware outcome, weights update once per completed session within family and tenor groups. Weights are shrunk toward uniform, capped, frozen before the final 30-session lockbox, and reused unchanged by score-only runs.

Expert	Combined indicator inputs	Dynamic treatment
Robust mean reversion	Median/MAD z, RSI, efficiency, stability	Delayed, cost-aware adaptive weight
Trend breakout	Donchian close break, MACD, efficiency, relative volume	Delayed, cost-aware adaptive weight
Volatility squeeze	Bollinger compression, close break, volume and PVO	Delayed, cost-aware adaptive weight
Session VWAP reversion	Session VWAP deviation, close volatility, time slot	Delayed, cost-aware adaptive weight
Seasonal / error correction	Prior-year seasonal move, support and confidence	Delayed, cost-aware adaptive weight
Stability-qualified reversion	Robust z, variance ratio and mean-reversion stability	Delayed, cost-aware adaptive weight
Flow divergence	Robust z, signed-volume proxy and effort-versus-result	Delayed, cost-aware adaptive weight

BULLISH_CONSENSUS and BEARISH_CONSENSUS require the frozen adaptive vote. CLUSTER, FRAGMENT, and MIXED states disclose partial evidence but cannot promote a trade by themselves. STRUCTURAL_BREAK fails closed on the CUSUM change alarm.

Core research controls: next-bar-open execution, full package costs, walk-forward folds with embargoes, 30-session untouched lockbox, D-4 liquidation, deflated Sharpe trial penalty, and separately frozen current-price scoring.

HO - NY Harbor ULSD

Product chapter for 143 configured structures anchored to HO. Patterns are a transparent view of the frozen adaptive combination and are not a separate signal.

Structures	Actionable	Watch	Consensus patterns	Median confidence	Latest 30-session net
143	0	0	1	43%	\$1,322

Most common current risk states: Normal 115, Impact Stress 17, Volume Dryness 9.

Dynamic pattern synthesis

The adaptive score is the frozen weighted sum of seven expert votes. Consensus requires at least two experts, sufficient delayed outcomes, and no change-point alarm. Mixed and fragment states remain descriptive only.

Trade code	Pattern state	Strength	Agreement	Votes	Top adaptive expert	Base regime	Risk state	Conf.

Dynamic pattern synthesis

The adaptive score is the frozen weighted sum of seven expert votes. Consensus requires at least two experts, sufficient delayed outcomes, and no change-point alarm. Mixed and fragment states remain descriptive only.

Trade code	Pattern state	Strength	Agreement	Votes	Top adaptive expert	Base regime	Risk state	Conf.

Dynamic pattern synthesis

The adaptive score is the frozen weighted sum of seven expert votes. Consensus requires at least two experts, sufficient delayed outcomes, and no change-point alarm. Mixed and fragment states remain descriptive only.

Dynamic pattern synthesis

The adaptive score is the frozen weighted sum of seven expert votes. Consensus requires at least two experts, sufficient delayed outcomes, and no change-point alarm. Mixed and fragment states remain descriptive only.

Methodology and operating safeguards

This generated file uses deterministic paper data and is not tradeable.

Control	Production contract
Causality	Completed 15-minute close only; any entry is next-bar open.
Dynamic learning	Delayed cost-aware outcomes; family/tenor weights; lockbox freeze.
Overfitting	Complete preregistered trial ledger; fold consistency and deflated-Sharpe penalty.
Liquidity	All-leg capacity, width, relative volume and labelled depth source.
Expiry	Earliest leg risk controls; mandatory D-4 exit; flat before D-3.
Missing data	Blocking source gaps fail closed; undefined diagnostics remain null.
High/low data	No synthetic spread highs or lows are fabricated from asynchronous legs.
Pattern state	Reporting only; it never bypasses validation or execution gates.
Trade budget	Maximum three independent new entries per session; one per algebra group.
Lockbox	Final 30 completed sessions are evaluation-only and never select the model.
Crack units	Every crack level and target is quoted in USD/bbl.
HO units	HO-only calendars, flies, and condors are quoted in cpq.
Gasoil units	USD/bbl = USD/MT / 7.45; cpq = USD/MT / 7.45 / 0.42.

Bloomberg API readiness

Windows setup uses 64-bit Python 3.12 or 3.13 under %USERPROFILE%\Pyenvs\bbg_technical_builder. INSTALL_BLOOMBERG.bat installs pinned analytics packages and Bloomberg blpapi from Bloomberg's official package index. CHECK_BLOOMBERG_READY.bat then exercises dated futures reference data, daily history, 15-minute bars, and current subscription/depth.

Bloomberg Terminal must be open and logged in. BDP, BDH, and BDIB are required. Subscription or true L2 depth depends on entitlement and may be reported as a warning. Only the receipt produced on the licensed Windows workstation certifies that workstation's connectivity.
